# EaseUS®

Make your life easy!

Are you backing up your PHI?

Is your backup encrypted?

Introducing...

## Powerful Encrypted Storage Device Backup Software for Windows Server

ONLY

# \$199

Monthly support \$29

### Top Benefits:

- **Business Price Leader**— cost is 50% price of competitors without sacrificing features, benefits or performance.
- **Fast and Time-saving**— with one click system backup & restore and other time saving features to simplify your IT admin routine.
- **Reliable and Secure**— back up any business crucial data and protect with 256-AES encryption algorithm to avoid unauthorized access.
- **Windows Server 2012/2012 R2 Compatible**
- **Multiple Backup Destinations**— store backups to multiple destinations: Tape device, CD/DVD, local hard drive, external drive, iSCSI device, NAS, DAS or network destination.

***Every time there is a HIPAA data breach penalty for a lost laptop or hard drive, the penalty would have been avoided if the data was encrypted.***

— Leon Rodriquez,  
Director, Office for Civil Rights

## EaseUS Todo Device Backup Server Features

### Backup:

---

- System Backup:** Full system protection allows you to easily back up and recover your entire operating system.
- Encryption:** 256-AES Industry Standard Encryption.
- Disk Imaging:** Block-level disk imaging quickly and efficiently backs up the entire disk or volumes. It can speed up the backup process of large files as it only backs up the modified blocks of data instead of the entire file.
- File Backup:** File-level backup allows you to selectively back up specific files, folders or file types, including network shared files.
- Sector-by Sector:** Store an exact copy of your disk or volume, including unused space, sector-by-sector backup assures you a 100% identical copy of the original.
- Incremental Backups:** Only back up changes made since the last backup, significantly reducing backup time and storage space.
- Differential Backups:** Only backup changes since the last full system backup, saving time and storage space.
- Backup Scheduler:** Flexible backup scheduler allows backups to run based on daily/weekly/monthly, or to be triggered by specific events (users logging in or out, system startup or shutdown).
- Unattended Backup:** Runs as a Windows service— ideal for unattended Servers. Backs up even when system logged out, slept or hibernated.
- Management:** Easily manage (view, edit, update, delete) backup job and automatically delete the out-of-date backup images, saving storage space.
- Email Notification:** Notify administrator with the results of backup operations via multiple email addresses.

### Recovery:

---

- System Restore:** Quickly recover your entire Windows system backup in minutes to the original or new location using a Linux or WinPE bootable media. The existing system can be restored in a new or dissimilar hardware environment.
- Flexible Restore:** Quickly restore what you need, recover granular files, folders, volumes, or all from a single disk image.
- Selective file restore:** Recover individual files and folders from a file backup image without restoring an entire image.
